Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Porter in view of Ryan et al and Gokcebay et al. Porter teaches a data storage system (Fig. 1;14) comprising a media storage device (10), a data exchange device and a media handling system (see column 4, lines 31-44). The opening in the system's housing for accepting the media storage device is closed off by a door/bulk access apparatus (20) hinged to the housing (the hinge and door, which is a panel, being removable from the housing using standard tools). First for claims 1, 8 and 15, Porter fails to teach plural media storage devices in the housing. Ryan teaches a housing with plural media storage devices (23); the openings (41) accepting the devices being closed off by a door (12). Furthermore, it held been held that merely duplication of the essential working parts of a device involves only routine skill in the art. *St Regis Paper Co. v.*

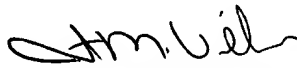

Art Unit: 3637

Bemis Co., 193 USPQ 8. Therefore, it would have been obvious to one of ordinary skill in the art to modify the housing of Porter by enlarging it and providing plural openings for plural media storage devices, such as is taught by Ryan, enabling the housing to hold more data media therein for use in the system. Second for claims 1, 4-8, and 11-15, Porter fails to teach a locking device between the door and the housing. Gokcebay teaches a housing with a mechanical/electric lock including a key lock and solenoid lock (see Fig. 1 and abstract, for example). It would have been obvious to one of ordinary skill in the art to modify the housing of Porter by providing a lock between its door and housing, such as the lock taught by Gokcebay, to prevent unauthorized access to the data media. For claim 15, since Porter in view of Ryan and Gokcebay teaches all of the limitations therein, the method steps would inherently be met.
